

SOLITEX EXTASANA®

Application & Fixing Guide – Metal Frame Australia

Weather Resistive Barrier for CEDRAL Fully Ventilated Façade System

CEDRAL

IMPORTANT

DUPLEX double sided tape is not intended to provide long term fixing but is an installation aid to hold the membrane in place until the façade mounting system is in place.

Membrane should be pulled taut to ensure TESCON® EXTORA tape can be easily installed and adequate pressure applied using the PRESSFIX tool.

1

Preparing Metal Framing

Clean all sharp edges and burrs from the steel framing to ensure the membrane will not be damaged during installation or in service.

2

Measure and Mark

Measure and mark where the top edge of the membrane will be located. This will vary depending on the bottom edge flashing details.

3

Apply DUPLEX as required

Fixing using pro clima DUPLEX

Apply DUPLEX double-sided tape to studs at suitable intervals to temporarily hold the membrane. Once applied remove the backing paper from DUPLEX.

4

2

Pull taut and fix

Aligning SOLITEX EXTASANA®

(1) Pull the membrane taut along the top edge adhering to DUPLEX as you go. (2) Adhere the bottom edge at the centre while applying tension.

5

3

Pull taut and fix

Setting in SOLITEX EXTASANA®

(3) Pull taut and adhere the bottom corner to the pro clima DUPLEX. Apply moderate pressure with the PRESSFIX tool to ensure bonding to DUPLEX.

6

Apply DUPLEX as required

Successive Layers of SOLITEX EXTASANA®

Apply pro clima DUPLEX at suitable intervals to accommodate the next layer of SOLITEX EXTASANA®.

SYSTEM

Weather Resistive

Wall

IMPORTANT

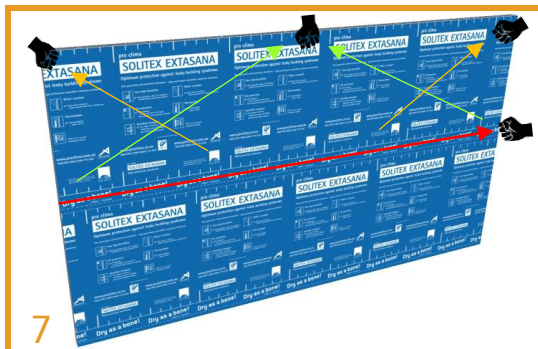

The PRESSFIX tool MUST be used to apply pressure to TESCON EXTORA® and TESCON EXTOSSEAL® after application to ensure the glue is activated and can reach maximum hold strength.

TESCON EXTORA APPLICATION

PRESSFIX is a malleable plastic tool for applying pressure to pro clima Adhesive TESCON® Tapes to ensure long term durable bonding.

Successive Layers of SOLITEX EXTASANA®

Apply successive layers of SOLITEX EXTASANA® using an upside down sequence ensuring adequate force is applied to adhere the membrane with slight tension.

Overlapping SOLITEX EXTASANA®

The membrane shall be overlapped 150 mm. The white line represents the 150 mm overlap line and can be used as guidance to align successive layers.

Window Reveal Dressing

Cut the membrane at window reveals with 45° angle cuts forming 4 flaps to be dressed into the reveal.

Prepping the Reveals

The flaps should be fixed into the window reveal using pro clima DUPLEX placed at the rear edge of the window reveal.

Folding the Reveals

Fold the SOLITEX EXTASANA® flaps back into the reveals cutting the flaps flush with the back edge of the metal framing.

Connections using TESCON EXTORA® Flashing tape

Apply at minimum TESCON EXTORA® 60 mm to the horizontal joints and apply pressure with the PRESSFIX tool.

IMPORTANT

TESCON EXTOSEAL® is required to be stretched at the window corners. Overstretching TESCOX EXTOSEAL® can lead to thinning and tearing.

TESCON EXTOSEAL APPLICATION

TESCON® ADHISO WS ensures a surface suitable for adhesion of sealants compatible with aluminum.

Sill Flashing – TESCOX EXTOSEAL®

Exposed framing at corners of the sill needs to be covered with TESCOX EXTOSEAL® Sill Tape to prevent any leaks around windows entering the framing.

Applying TESCOX EXTOSEAL® Sill Tape

TESCON EXTOSEAL® Sill Tape should extend minimum 100mm up the jambs. The corners of the TESCOX EXTOSEAL® are stretched & adhered into place.

Window Corner Seal With TESCOX EXTOSEAL®

At corners TESCOX EXTOSEAL® should extend at least 100mm in each direction. For wider frames the 200mm wide TESCOX EXTOSEAL® should be used.

Window Wet Seals – Front Seal

TESCON® ADHISO WS is applied to the jambs and header to align with the front wet seal according to the window detailing.

Continuous TESCOX® ADHISO WS

TESCON® ADHISO WS back seal should be continuous around the entire window. The front seal will be continuous on the jambs and header only.

Basic Install Completed Around Openings

SOLITEX EXTASANA®, TESCOX EXTORA® and TESCOX EXTOSEAL® form a continuous system. Any damage or tears should be patched with TESCOX EXTORA®.

19

Internal Corners

Special attention to ensure that curved corners do not occur.

20

Corner Connections

Connecting SOLITEX EXTASANA® in the corner can prevent the risk of short corners. Cut flush with the stud.

21

Apply Membrane to Faces

Each face of the building should be treated with a new piece of SOLITEX EXTASANA® and can be connected in the corner to prevent curved corners.

22

Abutting Membrane at Corners

The second piece should be cut long enough to extend >50 mm around the corner. A strip of pro clima DUPLEX can be used to hold the flap in place.

23

Setting the Corner

Pro clima PRESSFIX tool should be used to ensure the membrane is pushed hard into the corner and adhered to the DUPLEX and pressure applied with PRESSFIX.

24

Taping the Corner

TESCON EXTORA® 60mm should never be applied directly in the corner. The connection should be made on a flat section of wall just away from the corner.

IMPORTANT

ROFLEX grommets come in various sizes and it is important the correct size for the pipe is selected and installed to ensure a weathertight seal.

ROFLEX
Sealing grommet made of strong and highly flexible EPDM for rapid and permanent weathertight feedthroughs for pipes.

25

Cutting for Penetrations

Four slits are made in horizontal and vertical axis only large enough to fit the diameter of pipe.

26

Push Pipe Through

The pipe is pushed through and opens up the tabs. Trim the tabs to allow for ROFLEX and TESCON EXTORA® application.

27

Fitting ROFLEX

Place ROFLEX over the pipe in a diamond orientation. It should be a tight fit over the pipe. The pipe should be smooth and clean.

28

TESCON EXTORA® Application

Start to apply TESCON EXTORA® 60 mm width at the bottom edge and apply pressure with the PRESSFIX tool.

29

TESCON EXTORA® Application

Apply TESCON EXTORA® around the whole grommet working anti-clockwise to ensure the top layers overlap the lower layers.

30

TESCON EXTORA® Application

At the TESCON EXTORA® tape overlaps ensure the top layer fully covers the end of the TESCON EXTORA® layer below for optimum weathertightness.

SYSTEM

Weather Resistive Barrier

Wall

31

Abutment

Where SOLITEX EXTASANA® meets dissimilar wall types (concrete or masonry) a butt joint is formed.

32

Membrane Butt Joint

SOLITEX EXTASANA® shall be adhered to the studs using DUPLEX and cut in the corner flush with the stud.

33

Membrane Overlaps

Membrane overlaps can be made ensuring 150mm overlap.

34

TESCON EXTORA® Overlap

TESCON EXTORA® shall be applied firmly pressed with PRESSFIX. TESCON® PRIMER RP shall be applied with a brush to any porous masonry surfaces.

35

Weatherproof Seal

TESCON EXTORA® 60 mm is applied by pressing into the corner with the PRESSFIX. Attention to ensure the tape does not protrude further than the cladding.

36

Mechanical Fixing

If SOLITEX EXTASANA® is not supported at the last stud with a vertical top hat then mechanical fixings are required at max. 300 mm centers (see 48 & 49).

IMPORTANT

TESCON® PRIMER RP is a primer that penetrates into the sub-surface of porous substrates locking up loose particles and creating a highly adhesive substrate for the TESCON EXTORA® tape to be applied. TESCON EXTORA® can be applied while the TESCON® PRIMER RP is still tacky or fully dry.

TESCON® PRIMER RP
Applied to substrates to prepare for optimum adhesion such as concrete, masonry, timber, fibre cement, plywood, oriented strand board (OSB), and other porous or friable surfaces prior to application of TESCON EXTORA®.

37

**Soffit Junctions**

SOLITEX EXTASANA® butt joints are created at top plates of any infill walls into any type of concrete, masonry or timber soffits.

38

**Fixing SOLITEX EXTASANA®**

SOLITEX EXTASANA® is held in place using pro clima DUPLEX.

39

**Preparing the Corner**

The SOLITEX EXTASANA® is cut flush with the soffit. Porous concrete or masonry may need to be primed with TESCON® PRIMER RP using a brush.

40

**Weatherproof Seal**

TESCON EXTORA® 60 mm is applied by pressing into the corner with the PRESSFIX. Attention to ensure the tape does not protrude further than the cladding.

41

*TESCON® PRIMER RP required for rough or sandy concrete.

Base Detail connection with TESCON EXTORA®

SOLITEX EXTASANA® finished flush with the slab and taped onto the concrete. The flashing is fixed with a self-tapper and over taped to the membrane.

42

*TESCON® PRIMER RP required for rough or sandy concrete.

Seal to Slab Edge with TESCON EXTORA®

Seal the membrane to the slab edge using TESCON EXTORA® 100mm apply pressure with the PRESSFIX tool.

43

Vertical Rails 600 mm
Installed vertically to the stud wall, top hats spaced at maximum 600 mm are suitable to hold SOLITEX EXTASANA® up to the serviceability limits defined by Etex Exteriors ANZ with no additional fixings.

IMPORTANT

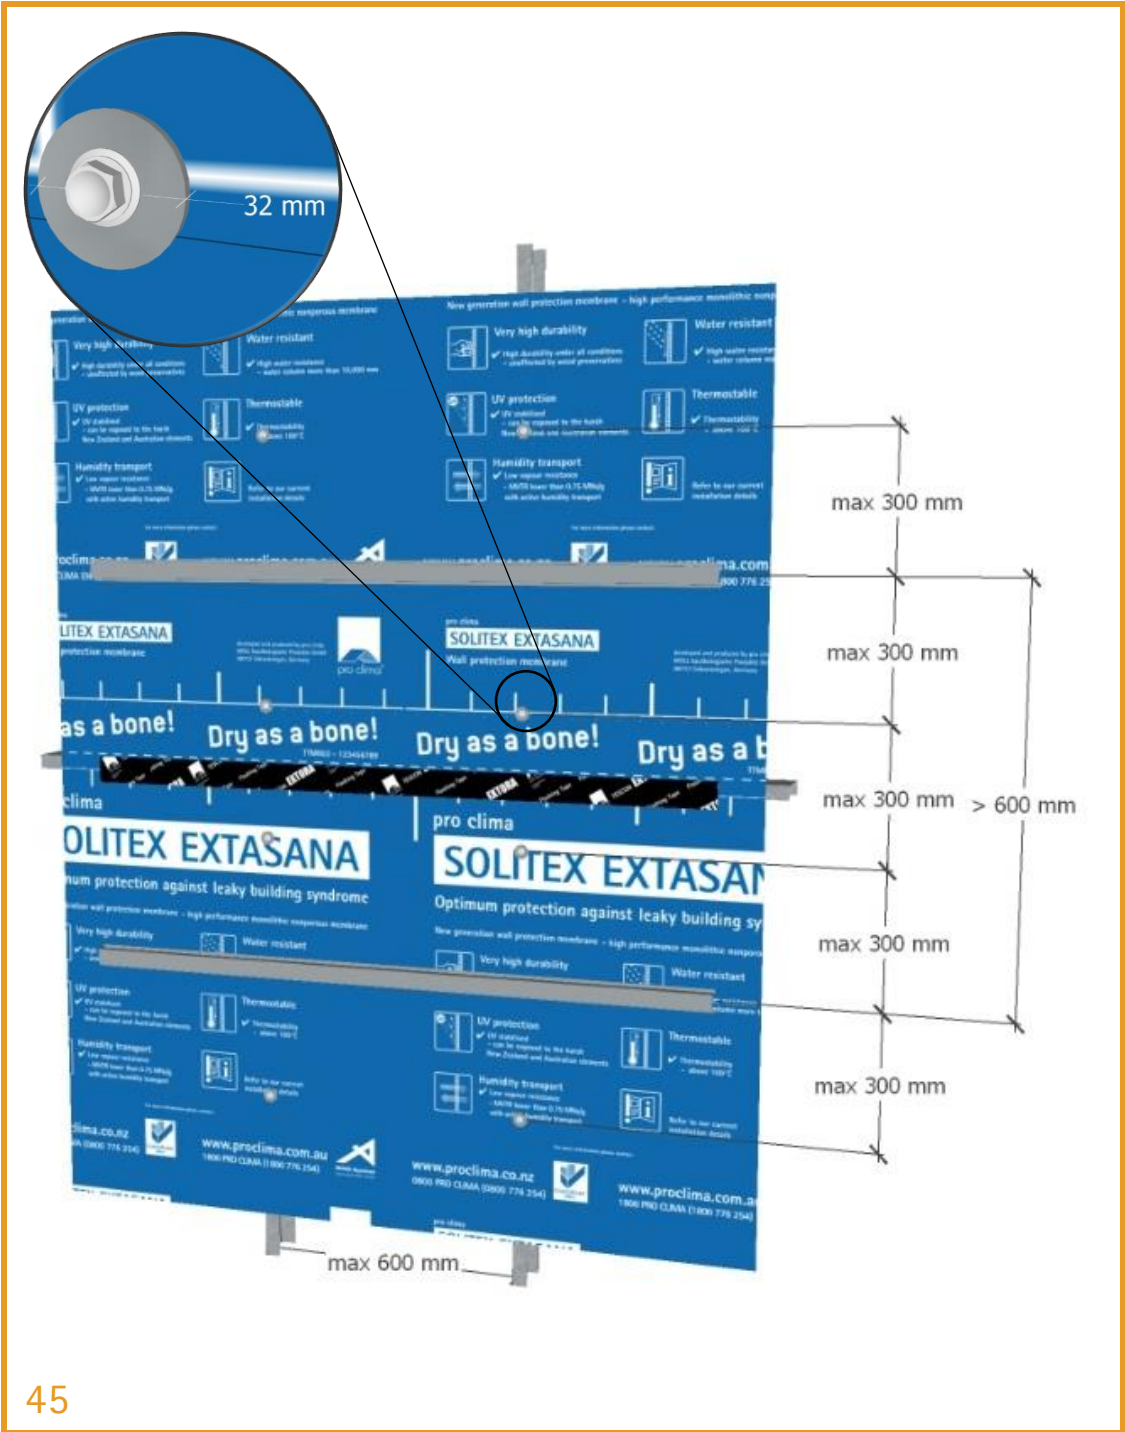

Rails provide continuous support for the membrane under leeward wind pressure. The studs provide support for the membrane under windward pressure. The maximum spans in both directions are 600 mm. Cladding rails at spans larger than 600 mm will require additional point fixings.

44

Horizontal Rails 600 mm

Installed horizontally over the studs, top hats spaced at maximum 600 mm are suitable to hold SOLITEX EXTASANA® up to the serviceability limits defined by Etex Exteriors ANZ with no additional fixings.

45

Horizontal Rails 900 mm

Horizontal top hats spaced at more than 600 mm require additional fixings to be added in-between to hold SOLITEX EXTASANA® at 300 mm centers with studs at maximum 600 mm centers. Galvanised hex self-drilling screws with EPDM washer (12 gauge) & 20 mm long shall be used to fix M8 large galvanised flat washers 32 mm diameter to hold SOLITEX EXTASANA® as shown to allow the max serviceability pressures defined by Etex Exteriors ANZ.

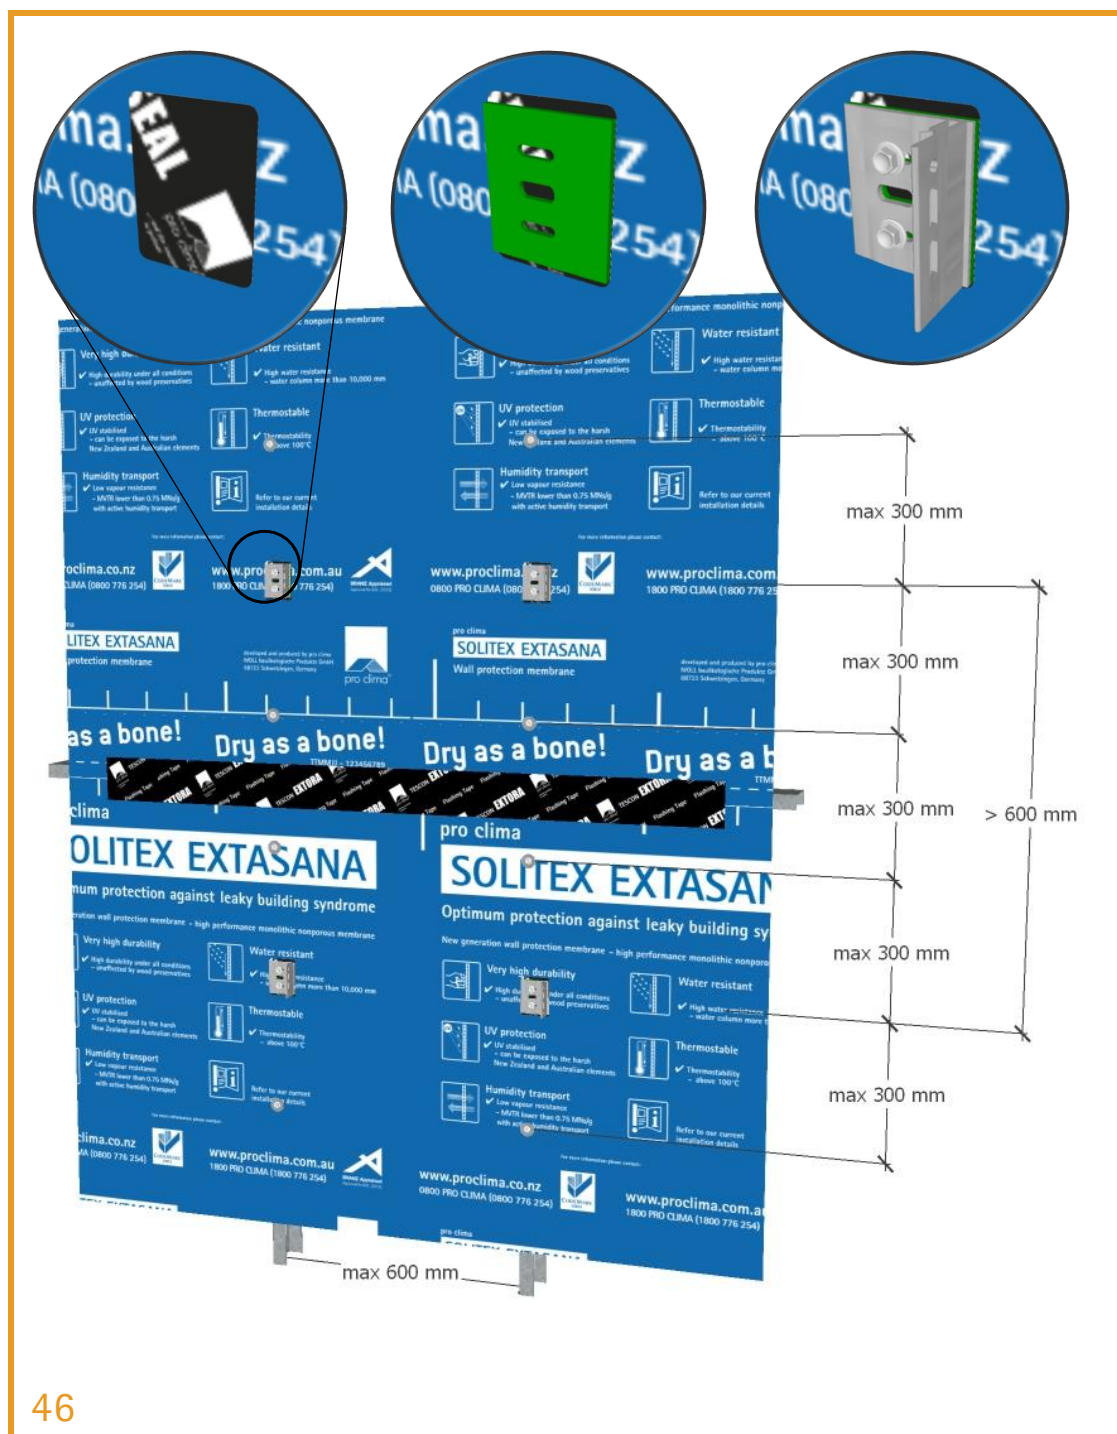

IMPORTANT

TESCON® NAIDECK mono patch is a butyl sealing patch. Sealing material is pulled into the hole created when a screw is fitted. This is particularly important with oval holes where the EPDM washers on the hex screws cannot effectively seal.

TESCON® NAIDECK mono patch
Sealing patches for use at bracket
mounts and point fixings.

46

Aluminium Bracketry System

Brackets are evenly spaced onto the stud wall. When spaced > 600 mm additional fixings at max 300 mm centers on max 600 mm center studs are required to hold SOLITEX EXTASANA®. Galvanised hex self-drilling screws with EPDM washer (12 gauge) & 20 mm long shall be used to fix M8 large galvanised flat washers 32 mm diameter to hold SOLITEX EXTASANA® as shown to allow the maximum serviceability pressures defined by Etex Exteriors ANZ.

Notes:

- Surface should always be dry.
- TESCON® PRIMER RP is always recommended for mineralic surfaces.

47

pro clima SOLITEX EXTASANA® Product Matrix

SOLITEX EXTASANA® is compatible with all pro clima Adhesive Tapes and Sealants. Optimum weatherproofing is achieved when wind tight connections are made between SOLITEX EXTASANA® and other building materials and components. The table above provides guidance on the use of pro clima Adhesive Products when used to connect SOLITEX EXTASANA® with other common building materials.

TESCON EXTORA®
Pressure sensitive adhesive tape for overlaps and end laps in SOLITEX EXTASANA® system.

TESCON EXTOSSEAL®
Flexible flashing tape for use around window and door openings as part of the SOLITEX EXTASANA® system.

DUPLEX
Double sided acrylic tape for temporary fixing of SOLITEX EXTASANA® to steel studs.

TESCON® ADHISO WS
Pure aluminium tape for wet seal connections to TESCOX EXTOSSEAL® and SOLITEX EXTASANA®.

48

Point Fasteners

Galvanised hex self-drilling screws with EPDM washer 12 gauge 20 mm to ensure fixings do not allow a water leakage path.

49

Washers for Load Spreading

M8 large galvanised flat washers 8 mm x 32 mm x 1.8 mm provide load spreading to increase fixing pressure rating.

Recommendations and requirements

- The recommendations in this guide use pro clima DUPLEX as a temporary fixing method to hold SOLITEX EXTASANA® as it is being applied to steel framing.
- SOLITEX EXTASANA®, TESCOX EXTORA® and TESCOX EXTOSSEAL® form a continuous system. Any damage or tears should be patched with TESCOX EXTORA®.
- When conditions on site are expected to be windy it is recommended that additional fixings are included at regular intervals in accordance with the fixing recommendations in this guide to ensure wind does not pull SOLITEX EXTASANA® from the wall prior to the cladding mounting systems being installed.
- It is recommended that the cladding mounting systems are installed as soon as possible after installing the membrane and close attention is paid to wind forecasts.
- pro clima KAFLEX can be used for cable penetrations when necessary.
- Although SOLITEX EXTASANA® provides a level of weather protection prior to cladding it is not intended as an early close in system and is designed and tested in combination with CEDRAL cladding systems to provide weathertightness up to the pressure thresholds specified by Etex Exteriors ANZ.

Certification of SOLITEX EXTASANA®
