Discover the Cedral system

In an industry changing move to make every home in New Zealand healthy and safe, Cedral have partnered with pro clima to deliver a fully tested and certified ventilated facade system.

Give your home a timeless finish, and rest assured that your property is weathertight and meets the requirements of the New Zealand Building Code.

Find out more below.

Cedral Timelessly beautiful facades

The ideal alternative to traditional weatherboard cladding, Cedral cladding material creates a modern and contemporary facade for your home.

Available in two stylish solutions:

- Cedral Lap planks are designed to be installed in a traditional lap-board style
- Cedral Click planks are New Zealand's first fibre cement tongue and groove cladding material

Both Cedral Lap and Cedral Click planks are available with a timber effect finish. Cedral Click is also available with a smooth surface.

pro clima Superior moisture protection

SOLITEX EXTASANA® by pro clima is a non porous flexible membrane that provides high waterproof and windproof protection.

It also gives the best possible protection against the formation of condensation and mould.

When it makes homes healthier, more energy efficient and more eco friendly for years to come, why compromise with inferior products.
